```cpp
//Linked list implementation for library and books

#include <iostream>
using namespace std;

class Book
{
public:
        Book(int s);

        //Getters and setters
        int getISBN();
        Book * getNext();
        void setISBN(int s);
        void setNext(Book * b);
    void print(std::ostream & out) const;

private:
    int isbn;
    Book * next;    //Pointer to next book
};
```
